Suggested Sources for Flexible X-Ray Gloves

With improvements in technology and chemicals, a new generation of protective gloves make x-ray gloves cheaper and dramatically easier to use. These new gloves are made from a chemical polymer instead of lead strips bound together. Lead vinyl gloves offer a full .5mm of lead equivalency protection and meet all the requirements of federal and state radiation protection regulations. These gloves are the most flexible and useable on the market, and they also come in three sizes! Lead vinyl gloves actually cost less than the traditional leather-covered ones and are readily available from many sources. If your supplier doesn't carry lead vinyl gloves, check out these resources:

Bar Ray Product

Catalog Nos. 69358, 69359, or 69360
<http://www.bar-ray.com/ppgmmg.html>
